## Edison High School Sleeps Better At Night With PC Matic Pro

**Customer:**  
Edison High School

**Industry:**  
Education

**Location:**  
Portland, OR

**Previous Security:**  
Symantec

**Customer Since:**  
2018

“*I live a lot calmer than I did before switching to PC Matic Pro*”

- Troy Spetter, Director of Educational Technology

### Who is Edison High School?

As a small, private school, Edison High School offers an individualized curriculum that meets each student's unique needs and maximizes the ability to learn. We also provide the emotional support that builds confidence and maturity. By empowering students with learning differences to experience academic success and personal growth, Edison does more than prepare teens for the future: it changes lives. Our work here is powerful and profound: helping every student to reach his or her full potential.

### Why did you switch to PC Matic Pro?

“When I came in they had a Symantec Antivirus system that was a network antivirus. The first thing that started me looking is that the Symantec started triggering for a renewal. That's what got it on my radar that I need to do something about this because it's just not working. I was skeptical, but I went ahead and worked with a PC Matic rep for a couple of test cases on a computer and the test deployment and I ended up kind of falling in love with the whole suite.”

### Why is PC Matic Pro perfect for an educational environment?

“You know education is a unique environment and the whole ransomware thing has become very real in education and in government. PC Matic for me gives me quite a bit of that peace of mind. I would say to a colleague you know what, you'll sleep a lot better at night knowing you're a whole lot less likely to come in in the morning and find all of your data encrypted. From the technology standpoint you try to keep everything locked down and keep everybody safe especially with minors in the environment. Since we've gone to PC Matic it's been a much safer environment and I plan on keeping it in the system for years to come.”
